

Part II: DFIR Group Exercise

The Financial Incident

Scenario

Alice reports that X DKK amount has been transferred from her bank account without her consent. She does not remember making this transfer. The only activity she remembers is sending a few small amounts to friends. A packet capture from the relevant period has been recovered. Your task is to investigate the PCAP and reconstruct what happened.

Group Task

This is a group forensic investigation. Hence, divide the work so that each group member investigates one host identified in the PCAP. Each investigator should focus on the activity of their assigned host and document anything they consider relevant. After the individual investigations, combine your findings and reconstruct the incident as a group. The purpose of dividing the hosts is to make the investigation systematic and reduce the chance of important evidence being missed.

Investigation Strategy

Before beginning, agree on your own investigation strategy. Decide as a group:

- How you will approach the PCAP
- How you will divide the investigation
- What you consider relevant evidence
- How you will combine the individual findings
- How you will reach a conclusion

There is no required investigation method. Your first strategy may be incomplete or even wrong. That is acceptable. Please document how your investigation developed and whether you had to change your approach after discovering new evidence.

Part II: DFIR Group Exercise

The Financial Incident

Evidence

Your conclusions must be supported by evidence from the PCAP. For important findings, include:

- Relevant packets or traffic
- Screenshots
- Packet numbers or timestamps where useful
- A short explanation of what the evidence shows

Do not only state what you believe happened. Show why you believe it happened.

Final Goal

As a group, reconstruct the digital crime and determine:

- How much money was stolen from Alice?
- What happened to the missing funds?

Base your conclusion on the combined evidence collected by all investigators.

Written Forensic Report (Mandatory)

Each group must submit a short document summarizing the investigation and findings (Max 5 pages). The title page does not count toward the page limit.

If you run out of space, place supporting screenshots in an appendix and refer to them clearly from the relevant section of the report.

Include:

- Title page includes these 2 elements:
 - **Group member names and emails:** Min 3 and max of 5 students per group!
 - **Executive summary:** briefing of the forensics results and the digital crime scene
- Report pages include:
 - **Forensic Strategy** — Briefly describe how your group approached the investigation.
 - **Wireshark Analysis Approach** — Briefly describe how you used Wireshark to investigate the PCAP, including the views, filters, statistics, or other analysis methods that helped you identify relevant evidence.
 - **Crime Scene Members** — Identify the relevant hosts involved in the incident.

Host / Role	IP Address	MAC Address

- **Suspected Criminal** — Identify the malicious host and support your conclusion with evidence from the PCAP.

Part II: DFIR Group Exercise

The Financial Incident

- **Incident Reconstruction** — Reconstruct the sequence of events from the initial network activity to the outcome.
- **Financial Impact** — Determine the amount of money stolen and explain the evidence supporting your conclusion.
- **Appendix:** includes screenshots and visual evidence of your findings and supporting your claims with a caption for each element. For each important piece of evidence, include the relevant packet/frame number(s) in your reference from the PCAP so the finding can be easily verified.

Keep the report concise and evidence-based. Every major conclusion should be supported by evidence from the PCAP.

Presentation (Mandatory)

You will present your investigation and findings to the class. Prepare a PowerPoint presentation of maximum 5 slides (max 10 min) per group. Your presentation should communicate:

- Your investigation strategy
- The most important evidence
- Your reconstruction of the incident
- Your conclusion

Keep the presentation short and evidence-focused. You are the forensic team. The PCAP is your crime scene.
